㉒ Winding machine for paper web to be cut into smaller rolls.

㉓ The machine for rewinding webs of paper from a large roll onto a core to form small rolls includes a continuous conveyor for the cores, a distributor associated with said conveyor for applying adhesive to the cores, an upper winding cylinder, a lower winding cylinder defining a nip with the upper cylinder for receiving a core, and an insertion group which ad-

vances up the core from said conveyor into said nip. The lower cylinder is smooth. The adhesive distributor includes a dispensing cylinder (34) having a cylindrical surface able to apply the adhesive substantially in the form of an axially-extending longitudinal strip (S) onto the surface of the cores (A)

The present search report has been drawn up for all claims					
Place of search	Date of completion of search	Examiner			
The Hague	11 December 90	EVANS A.J.			
CATEGORY OF CITED DOCUMENTS					
X: particularly relevant if taken alone					
Y: particularly relevant if combined with another document of the same category					
A: technological background					
O: non-written disclosure					
P: intermediate document					
T: theory or principle underlying the invention					
E: earlier patent document, but published on, or after the filing date					
D: document cited in the application					
L: document cited for other reasons					
&: member of the same patent family, corresponding document
